Sukai Huang

Postdoctoral Research Fellow | Monash University | Melbourne, Australia | huangsukai1997@gmail.com

Professional Summary

Postdoctoral researcher at Monash University working on LLM/VLA-driven embodied agents and sequential decision-making. First-author publications at AAAI, ICAPS, AAMAS, and ACL on LLM planning, neuro-symbolic AI, and VLM/RL reward modeling; open-source VLA contributor (89.8% end-to-end success on LIBERO-Goal). Goal: verifiable, robust autonomous systems that couple neural perception and learning with symbolic planning.

Research Experience

Postdoctoral Research Fellow, **Monash University, Melbourne, Australia** **Jun 2025 – Present**

Supervised by A/Prof Hamid Rezatofighi (DARPA HARNESS PI; CVPR/NeurIPS/IROS Area Chair)

DARPA HARNESS — Neuro-Symbolic Planning for Autonomous Robotics

- Developed neuro-symbolic planning and instruction-following modules for autonomous robotic systems, integrating LLM-based mission interpretation with symbolic plan generation and reinforcement learning control.
- Investigated the impact of instruction granularity on embodied agents' performance.

ONR SEA-AI — World Model and Planning for Maritime Autonomy

- Built a symbolic world model that abstracts 3D scene data into a compact 2.5D planning representation, implementing D^* Lite path planning under partial observability and visibility-based area search for maritime patrol.
- Developed mission analysis pipeline that converts high-level natural language descriptions into structured planning tasks, reducing operator workload from low-level control to mission-level supervision.

Student Supervision

- Co-supervised two honours/master students at Monash: PACE-Drone (preference-aware continual exploration with POMDP planning and Gaussian Process preference learning for drone missions) and WALR (width-aware language reward design for vision-language-action models that addresses the language ignoring problem in embodied AI).

PhD in Engineering and IT, **The University of Melbourne, Melbourne, Australia** **Jul 2021 – Oct 2025**

Thesis: Integrating Natural Language for Sequential Decision Problems; Supervised by A/Prof Nir Lipovetzky (ICAPS Executive Committee, Mentoring Chair) and Prof Trevor Cohn (Google Research)

- Investigated how natural language can be reliably integrated into sequential decision-making (SDM) systems across two paradigms: model-free reinforcement learning and model-based automated planning.
- RL line: exposed critical limitations of VLM-based reward models (susceptibility to false positive rewards) and proposed BiMI, a reward function that suppresses false positives with minimal trade-off on false negatives.
- Planning line: developed LLM-symbolic planning pipelines ("Planning in the Dark") that generate executable plans without expert-generated examples, and analysed robustness of end-to-end LLM plan generation strategies (ICAPS 2025 Oral).

Machine Learning Engineer (Part-time, Remote), **FINVISE London** **May 2022 – Nov 2023**

- Built an Automated Valuation Model (AVM) achieving $> 80\%$ accuracy; designed a multimodal data pipeline handling 20M+ property records.

Open-Source Contributions

StarVLA — Open-Source VLA Framework (Code Contributor, github.com/starVLA)

- Responded to Issue #59 in the Qwen VLA open-source repository, where the Adapter architecture's reproduction underperformed expectations: identified and refactored a subtle implementation deviation in the action-query embedding construction, aligning it with the official Qwen-OFT reference logic and fixing the training convergence anomaly.
- With a Qwen3-VL-2B backbone (language side frozen), completed 50k training steps on LIBERO-All and achieved an 89.8% end-to-end success rate on the 500-task LIBERO-Goal benchmark, reproducing the official baseline convergence trend; contributed fully reproducible training launch scripts.

Education

Doctor of Philosophy (PhD) – Engineering and IT **Jul 2021 – Oct 2025**
The University of Melbourne | Melbourne Research Scholarship

Bachelor of Advanced Computing (Honours, First Class) **Jul 2017 – Jul 2021**
Australian National University (ANU) | GPA: 6.84/7.00; Specialization: Machine Learning Systems;
ANU Dean's Award 2019

Awards & Scholarships

- **AAAI 2025 Scholarship**, Association for the Advancement of Artificial Intelligence
- **ICAPS 2025 Scholarship**, International Conference on Automated Planning and Scheduling
- **Invited Speaker**, Kingston AI Symposium 2026, Adelaide, Australia
- **IEEE COG 2020 Champion**, Angry Birds Level Generation Competition, Aesthetic Track
- **ANU Dean's Award**, 2019; Chancellor's Letters of Commendation, 2018 & 2020

Academic Service

- Reviewer: ICAPS, ACL Rolling Review (ARR), Artificial Intelligence journal.

Technical Skills

- **Programming & Tools**: PyTorch, LangChain, Mattcopock Skills, Codex, SQL, C++, Haskell; Git, Docker, W&B
- **Domain Expertise**: Vision-Language-Action (VLA) models, embodied agents, LLM reasoning & planning, LLM agent systems, reinforcement learning (RL), neuro-symbolic AI, automated planning (PDDL), sequential decision-making (POMDP), multimodal LLMs / VLMs, LLM evaluation & benchmark design.
- **Languages**: Chinese (native), English (professional)
